

Foot Detox Waiver

The technology of the Ionic Detoxification System has been in development for several decades and is FDA approved. The principle of the Ionic Detoxification System is to use micro current to facilitate the movement or transfer of ions in and out of cells and restore the balance of positive and negative charges of cells. These ions are able to enter the body through the 4, 000 large pores of the feet. The circulatory and lymphatic systems transport the ions throughout the body. In this way, all the body's organs, including the liver, intestines, kidneys, lungs, skin and immune system can become energized and stimulated to function optimally. The body then rids itself of these toxins through its normal processes of urination, defecation and sweating.
